This book constitutes the refereed proceedings of the 8th IFIP WG 8.5 International Conference on Electronic Participation, ePart 2016, held in Guimarães, Portugal, in September 5-8, 2016. The 14 revised full papers presented were carefully reviewed and selected from 31 submissions. The papers reflect completed multi-disciplinary research ranging from policy analysis and conceptual modeling to programming and visualization of simulation models. They are organized in four topical threads: theoretical foundations; critical reflections; implementations; policy formulation and modeling. "This book consists of one hundred and nine selected papers presented at the 2015 International Conference on Materials Engineering and Environmental Science (MEES2015), which was successfully held in Wuhan, China during September 25-27, 2015. All papers selected for this proceedings were subjected to a rigorous peer-review process by at least two independent peers. The papers were selected based on innovation, organization, and quality of presentation. The MEES2015 covered a wide spectrum of research topics, ranging from fundamental studies, technical innovations, to industrial applications in Chemical Material and Chemical Processing Technology, Composite Materials, Alloy Materials and Metal Materials, Characteristics of Materials, Building Material and Construction Technology, Ecology and Environment, Technology for Environmental Protection, Economy and Environment, Mechanical and Control Engineering, and Manufacturing Technology. The MEES2015 brought together more than one hundred researchers from China, South Korea, Taiwan, Japan, Malaysia, and Saudi Arabia, and provided them with a forum to share, exchange and discuss new scientific development and future directions of Materials Engineering and Environmental Science."--Provided by publisher The authors describe mostly in non-technical language the development of a new scientific paradigm based on nonlinear deterministic dynamics and fractal geometry. The concepts from these two mathematical disciplines are interwoven with data from the physical, social and life sciences. In this way rather sophisticated mathematical concepts are made accessible through experimental data from various disciplines, and the formalism is relegated to appendices. It is shown that the complexity of natural and social phenomena invariably lead to inverse power law distributions, both in terms of probabilities and spectra. This book tries to show how to think differently about familiar phenomena, such as why the bell-shape curve ought not to be used in teaching or in the characterization of such complex phenomena as intelligence.

Like a trade book, the book does not require extensive background in physics and has a style that makes it hard to put down ... The book, in fact, is the among the best introductions for the newcomer to the area of 'statistical thinking' that I have seen ... I recommend this book to undergraduates and beginning graduate students who want to get a concrete impression of what many statistical mechanicians are actually doing today.”Journal of Statistical Physics “It provides the reader with a good grounding in nonlinear science and, at the same time, a superb critique of the traditional natural science approaches that often dominate our thinking.”Complexity and Chaos in Nursing In 1925, the State of Tennessee enacted a law that prohibited the teaching of evolution in public schools, specifically, that man came from apes. The law was immediately challenged by the ACLU and pitted two famous lawyers Clarence Darrow and William Jennings Bryan, a religious Fundamentalist and one-time presidential candidate, in a bruising contest. The case became famous, known as the Monkey Trial.In this fictional trial, a high school teacher was fired for introducing religion into his biology class in the form of criticism of Darwinism. The trial involves expert witnesses from a variety of fields who defend and attack Darwinism, but not merely from a biology point-of-view. There are deep religion/atheism, legal, political, philosophical and cultural issues that are at stake and reflect today's bifurcated society.The Supreme Court cases in the past fifty years on the Establishment Clause of the First Amendment are demonstrated as in disarray especially in school-religion cases. The famous bioatheist, Richard Dawkins, is called out for his trenchant criticism of Christians and distortion of Darwinism to achieve his ends.The lawyers are cut from vastly different cloth - an ex-Vietnam soldier and an anti-war conscientious objector. But the scientific and religious experts do most of the talking from the witness stand.The present book describes the preparation for and First Week of Trial. • Best Selling Book in English Edition for NTA UGC NET Home Science (Paper I & II) Exam with objective-type questions as per the latest syllabus given by the NTA. • Compare your performance with other students using Smart Answer Sheets in EduGorilla's NTA UGC NET Home Science (Paper I & II) Exam Practice Kit. • NTA UGC NET Home Science (Paper I & II) Exam Preparation Kit comes with 10 Tests (8 Full-length Mock Tests + 2 Previous Year Papers) with the best quality content. • Increase your

This handbook offers a comprehensive treatise on Grammatical Evolution (GE), a grammar-based Evolutionary Algorithm that employs a function to map binary strings into higher-level structures such as programs. GE's simplicity and modular nature make it a very flexible tool. Since its introduction almost twenty years ago, researchers have applied it to a vast range of problem domains, including financial modelling, parallel programming and genetics. Similarly, much work has been conducted to exploit and understand the nature of its mapping scheme, triggering additional research on everything from different grammars to alternative mappers to initialization. The book first introduces GE to the novice, providing a thorough description of GE along with historical key advances. Two sections follow, each composed of chapters from international leading researchers in the field. The first section concentrates on analysis of GE and its operation, giving valuable insight into set up and deployment. The second section consists of seven chapters describing radically different applications of GE. The contributions in this volume are beneficial to both novices and experts alike, as they detail the results and researcher experiences of applying GE to large scale and difficult problems. Topics include: • Grammar design • Bias in GE • Mapping in GE • Theory of disruption in GE • Structured GE • Geometric semantic GE • GE and semantics • Multi- and Many-core heterogeneous parallel GE • Comparing methods to creating constants in GE • Financial modelling with GE • Synthesis of parallel programs on multi-cores • Design, architecture and engineering with GE • Computational creativity and GE • GE in the prediction of glucose for diabetes • GE approaches to bioinformatics and system genomics • GE with coevolutionary algorithms in cybersecurity • Evolving behaviour trees with GE for platform games • Business analytics and GE for the prediction of patient recruitment in multicentre clinical trials

Scientific writing is often dry, wordy, and difficult to understand. But, as Anne E. Greene shows in Writing Science in Plain English, writers from all scientific disciplines can learn to produce clear, concise prose by mastering just a few simple principles. This short, focused guide presents a dozen such principles based on what readers need in order to understand complex information, including concrete subjects, strong verbs, consistent terms, and organized paragraphs. The author, a biologist and an experienced teacher of scientific writing, illustrates each principle with real-life examples of both good and bad writing and shows how to revise bad writing to make it clearer and more concise. She ends each chapter with practice exercises so that readers can come away with new writing skills after just one sitting. Writing Science in Plain English can help writers at all levels of their academic and professional careers—undergraduate students working on research reports,

established scientists writing articles and grant proposals, or agency employees working to follow the Plain Writing Act. This essential resource is the perfect companion for all who seek to write science effectively. Built on interviews with over 100 lobbyists, Kenneth Godwin, Scott Ainsworth, and Erik Godwin show that much of the research on organized interests overlooks the lobbying of regulatory agencies even though it accounts for almost half of all lobbying—even though bureaucratic agencies have considerable leeway in the how they choose to implement law. This groundbreaking new book argues that lobbying activity is not mainly a struggle among competing interests over highly collective goods; rather, it's the public provision of private goods. Through a series of highly readable case studies, the authors employ both neopluralist and exchange perspectives to explore the lobbying activity that occurs in the later stages of the policymaking process which are typically less partisan, involve little conflict, and receive scant public attention. *Lobbying and Policymaking: The Public Pursuit of Private Interests* is an ideal way to expose students to cutting-edge research in an accessible, fascinating package.
