Modeling of Earth and Environment Processes" (Ishlinsky Institute for Problems in Mechanics of the Russian Academy of Sciences). The book includes theoretical and experimental studies of processes in the atmosphere, oceans, the lithosphere, and their interaction; environmental issues; problems of human impact on the environment; and methods of geophysical research. Engineering technology is of crucial importance to the infrastructure on which modern societies depend, and keeping abreast of the latest research and developments in the field is of vital importance. This book presents the proceedings of HCET 2022, the 7th International Technical Conference on Frontiers of Hydraulic and Civil Engineering Technology, originally due to be held, in Sanya, China, from 25-27 September 2022, but instead held as a fully virtual event on Zoom due to continued uncertainty related to the Covid 19 pandemic. HCET is a platform for the dissemination of research results on the latest advances in the areas of hydraulic and civil engineering technology and environmental engineering, and provides an opportunity for scientists, researchers and engineers from around the world to exchange their findings, discuss developments, and possibly establish a basis for collaboration. A total of 275 submissions were received from international contributors, and all were subjected to a rigorous peer-review process, with each paper reviewed by a minimum of two experts. Papers were also checked for quality and plagiarism, after which, 163 papers were accepted for presentation and publication. Topics covered include the research and development of concrete structure design and analysis, structural mechanics and structural engineering, geological exploration and earthquake engineering, building technology, urban planning, energy, environment and advanced engineering science and applications. The book offers a state-of-the-art overview of recent developments, and will be of interest to all those working in the fields of hydraulic and civil engineering technology. This popular textbook covers how the built environment and the management of energy relate to the quality of human living-conditions and the environmental performance of buildings. It is the key introductory text for understanding the principles and theories of the environmental science behind construction, and the only text on the market to provide the basic scientific principles of such a broad range of topics. The text covers a range of areas in the field, including climate change, energy management, and sustainability in construction, with an important focus on contemporary environmental topics such as carbon, lifetime performance and rating schemes. The author is known for his extremely clear, finely crafted text, and the book offers a wealth of excellent worked examples. This text is designed to be useful, at all levels, to students and practitioners of architecture, construction studies, building services, surveying, and environmental science. New to this Edition: - Expansion upon the environmental narrative with

coverage of contemporary topics such as carbon, lifetime performance and rating schemes - Additional figures, images and sub-topics in chapters - An updated section on building services to give a broader understanding of modern building services equipment options, specifications and performance implications - Inclusion of a new section which offers commentary on the future of environmental science in building Environmental Science and Sustainability helps students discover their role in the environment and the impact of their choices. Authors David Montgomery and Daniel Sherman bring scientific and environmental policy expertise to a modern treatment of environmental science; in addition to teaching climate change, sustainability, and resilience, they reveal how our personal decisions affect our planet and our lives. Women make up the vast majority of activists and organizers of grassroots movements fighting against environmental ills that threaten poor and people of color communities. [This] collection of essays ... pays tribute to the ... contributions women have made in these endeavors. The writers offer varied examples of environmental justice issues such as children's environmental-health campaigns, cancer research, AIDS/HIV activism, the Environmental Genome Project, and popular culture, among many others. Each one focuses on gender and sexuality as crucial factors in women's or gay men's activism and applies environmental justice principles to related struggles for sexual justice. Drawing on a wide variety of disciplinary perspectives, the contributors offer multiple vantage points on gender, sexuality, and activism.-Back cover. Covering global threats such as climate change, population growth, and loss of biodiversity, as well as national, state, and local problems of environmental pollution, energy use, and natural resource use and conservation, Environmental Policy and Politics provides a comprehensive overview of U.S. policy-making processes, the legislative and administrative settings for policy decisions, the role of interest groups and public opinion in environmental politics, and the public policies that result. It helps readers understand modern environmental policy and its implications, including the need for a comprehensive and integrated approach to problem solving. Open this book, turn on your computer, and get ready for an eye-opening journey of discovery. You'll be surprised at how fascinating the study of environmental science can be. How heated the debate. Psychology (1996), this book applies psychological theory and research to environmental problems. After outlining current environmental difficulties, the authors demonstrate how 6 major approaches in psychology (social psychological, psychoanalytic, behavioral, physiological, cognitive, and holistic) can be applied to environmental problems. The authors demonstrate why it is critical to address environmental threats now, and offer ideas on how psychological principles can contribute to building a sustainable culture. Personal examples engage the reader and provide suggestions for changing behavior and political structures. Reorganized and updated throughout, the second edition features a new chapter on neuropsychological and health issues and a list of key concepts in each chapter. Cartoons and humorous analogies add a light touch to the book's serious message. Written for psychology and environmental studies students, the book is an excellent teaching tool in courses on environmental, conservation, or ecological issues, found in departments of psychology, sociology, environmental science, and biology. It will also appeal to anyone interested in psychology's potential contributions to mounting ecological difficulties. Previous editions cataloged under Brennan, Scott "Yingyi Situ and David Emmons in Environmental Crime address a neglected area in Criminology and Criminal Justice and do so with masterful attention to details of environmental law, law enforcement, enthralling examples and up-to-date cases. Well-written, scholarly and incisive in its commentary and stellar in organization, their work will be well received by both undergraduate and graduate students." - Frank E. Hagan, Ph.D., Chair, Graduate Program in Administration of Justice, Professor of Sociology/Criminal Justice, Mercyhurst College, Pennsylvania We and our environment are at risk. Air, water, and soil pollution, hazardous waste disposal, global warming, acid rain, and reduction of the ozone layer threaten the natural environment and endanger people's health. Within the last decade, however, environmental violations have been defined as crimes and violators viewed as criminals; and criminal prosecution of the accused and criminal sanctions against the convicted have accelerated. This accessibly written book examines the criminalization of environmental wrong-doing. Designed as a textbook for environmental crime courses at the undergraduate or beginning graduate levels, it is comprehensive and logically organized. The text explores the nature, causes, investigation, prosecution, and prevention of environmental crime. Special emphasis is placed on the human, economic, social, and psychological impacts of the environmental crime by corporations, criminal organizations, the government, and individuals. Although examples throughout the book reflect not only North America but the world, a final chapter is devoted to global environmental law. The chapter also reviews promising approaches being used by other nations in fighting environmental crime. This nine-session module is written to be practical and accessible. It provides both extensive background and step-by-step instructions for using three-dimensional methods to explore this complex subject. It fits easily into a middle or high school curriculum while addressing the Next Generation Science Standards. "Inspiring people to care about the planet." This conference will discuss transformation issues in various fields along with the COVID-19 crisis in the world. During these two years of this pandemic, the world faced many significant changes. These changes have impacted various aspects of life, not only on a small scale in people's everyday life, but also on a large scale that changes the social structure of society in the global world. The keywords in this transformation are adaptation, resilience, and innovation. Each party involved in the change is required to make adjustments so as not to be left behind. The important aspect is to what extent these parties come up with new findings to survive amid the pace of this rapid global

transformation. By focusing on transformation issues, this conference will bring scholars, practitioners and policy makers from various disciplines to discuss changes in various fields of life during the COVID-19 pandemic and in the future. This conference is also expected to be a medium for disseminating research findings related to issues of change in various fields including but not limited to social, economic, cultural, educational, political and government, gender, environment, religion, communication, and international relations. The four volumes of the book series "Engineering Tools for Environmental Risk Management" deal with environmental management, assessment & monitoring tools, environmental toxicology and risk reduction technologies. This last volume focuses on engineering solutions usually needed for industrial contaminated sites, where nature's self-remediation is inefficient or too slow. The success of remediation depends on the selection of an increasing number of conventional and innovative methods. This volume classifies the remedial technologies and describes the reactor approach to understand and manage in situ technologies similarly to reactor-based technologies. Technology types include physicochemical, biological or ecological solutions, where near-natural, sustainable remediation has priority. A special chapter is devoted to natural attenuation, where natural changes can help achieve clean-up objectives. Natural attenuation and biological and ecological remediation establish a serial range of technologies from monitoring only to fully controlled interventions, using 'just' the natural ecosystem or sophisticated artificial living systems. Passive artificial ecosystems and biodegradation-based remediation - in addition to natural attenuation - demonstrate the use of these 'green' technologies and how engineering intervention should be kept at a minimum to limit damage to the environment and create a harmonious ecosystem. Remediation of sites contaminated with organic substances is analyzed in detail including biological and physicochemical methods. Comprehensive management of pollution by inorganic contaminants from the mining industry, leaching and bioleaching and acid mine drainage is studied in general and specifically in the case of an abandoned mine in Hungary where the innovative technology of combined chemical and phytostabilization has been applied. The series of technologies is completed by electrochemical remediation and nanotechnologies. Monitoring, verification and sustainability analysis of remediation provide a comprehensive overview of the management aspect of environmental risk reduction by remediation. This book series focuses on the state of knowledge about the environment and its conscious and structured application in environmental engineering, management and decision making.
