Some planners limit discussions of ethics to simple, though important, questions about the propriety of their daily activities. This approach to ethics restricts discussion of professional ethics to the

propriety of everyday social and professional relationships. It ignores the broader ethical content of planning practice, methods, and policies. While narrow definitions of ethical behavior can easily preoccupy public officials and professional associations, they divert attention from more profound moral issues. Martin Wachs argues that ethical issues are implicit in nearly all planning decisions. For illustrative and educational reasons, it is useful to divide ethics in planning into four distinct categories. The first category includes the moral implications of bureaucratic practices and rules

of behavior regarding clients and supervisors. The second category includes ethical judgments which planners make in exercising their "administrative discretion." More complex, and represented by a third category, are the moral implications of methods and the ethical content of criteria built into planning techniques and models. The final type represents the basic choices which society makes - those inherent in the consideration of major policy alternatives. Ethics in Planning contains a variety of representative papers to capture the current state of

thinking. This book will be important as a text for survey classes in professional ethics given by university planning programs. It should also supplement short courses in planning ethics for practicing professionals and provide source materials for discussions of planning ethics sponsored by local chapters of the American Planning Association and similar organizations. It gathers together exemplary and critical works, thus it will also interest individual planners in a field that only continues to grow in recognition and importance. Academic and professional publishing

represents a diverse communications industry rooted in the scholarly ecosystem, peer review, and added value products and services. Publishers in this field play a critical and trusted role, registering, certifying, disseminating and preserving knowledge across scientific, technical and medical (STM), humanities and social science disciplines. Academic and Professional Publishing draws together expert publishing professionals, to provide comprehensive insight into the key developments in the industry and the innovative and multi-disciplinary

approaches being applied to meet novel challenges. This book consists of 20 chapters covering what publishers do, how they work to add value and what the future may bring. Topics include: peer-review; the scholarly ecosystem; the digital revolution; publishing and communication strategies; business models and finances; editorial and production workflows; electronic publishing standards; citation and bibliometrics; user experience; sales, licensing and marketing; the evolving role of libraries; ethics and integrity; legal and copyright aspects; relationship

management; the future of journal publishing; the impact of external forces; career development; and trust in academic and professional publishing. This book presents a comprehensive review of the integrated approach publishers take to support and improve communications within academic and professional publishing. Brings together expert publishing professionals to provide an authoritative insight into industry developments Details the challenges publishers face and the leading-edge processes and procedures used to

meet them Discusses the range of new communication channels and business models that suit the wide variety of subject areas publishers work in "An abundance of resources and guidelines exist for researchers writing for peer-reviewed journals. This quick reference provides a broad overview of the writing process; guidelines for determining the type of article to write; considerations for choosing a journal and submitting the article; and links to several comprehensive resources for researchers seeking to publish Public Health Services and Systems Research

(PHSSR) in peer-reviewed literature. PHSSR is a field of study that examines the organization, financing, and delivery of public health services within communities, and the impact of these services on public health. Since PHSSR is an emerging discipline, this document will also provide guidance on where PHSSR is typically published—for those looking to disseminate their research and for those seeking research findings. Whether you have published many articles during your career or have never submitted a manuscript for peer-review publication, we

hope that this reference will provide you with some useful tips and resources"--  
Publisher's description.  
Charleston Briefings: Trending Topics for Information Professionals is a thought-provoking series of brief books concerning innovation in the sphere of libraries, publishing, and technology in scholarly communication. The briefings, growing out of the vital conversations characteristic of the Charleston Conference and Against the Grain, will offer valuable insights into the trends shaping our professional lives and the institutions in which we work.

The Charleston Briefings are written by authorities who provide an effective, readable overview of their topics--not an academic monograph. The intended audience is busy nonspecialist readers who want to be informed concerning important issues in our industry in an accessible and timely manner. This crucial book guides academics and researchers through the process of peer reviewing manuscript articles, outlining the methods and proficiencies required to write a high-quality review. Gloria Barczak and Abbie Griffin specifically

highlight the importance of becoming a first-rate reviewer to early career scholars. What practices helps your organization to develop its capacity to recognize patterns? What is a worst-case scenario for losses? Is any Open peer review documentation required? Is the scope of Open peer review defined? How long will it take to change? Defining, designing, creating, and implementing a process to solve a challenge or meet an objective is the most valuable role... In EVERY group, company, organization and department. Unless you are talking a one-time, single-use project, there

should be a process. Whether that process is managed and implemented by humans, AI, or a combination of the two, it needs to be designed by someone with a complex enough perspective to ask the right questions. Someone capable of asking the right questions and step back and say, 'What are we really trying to accomplish here? And is there a different way to look at it?' This Self-Assessment empowers people to do just that - whether their title is entrepreneur, manager, consultant, (Vice-)President, CxO etc... - they are the people who rule the future. They are the person who asks

the right questions to make Open Peer Review investments work better. This Open Peer Review All-Inclusive Self-Assessment enables You to be that person. All the tools you need to an in-depth Open Peer Review Self-Assessment. Featuring 946 new and updated case-based questions, organized into seven core areas of process design, this Self-Assessment will help you identify areas in which Open Peer Review improvements can be made. In using the questions you will be better able to: - diagnose Open Peer Review projects, initiatives, organizations, businesses and processes using

accepted diagnostic standards and practices - implement evidence-based best practice strategies aligned with overall goals - integrate recent advances in Open Peer Review and process design strategies into practice according to best practice guidelines Using a Self-Assessment tool known as the Open Peer Review Scorecard, you will develop a clear picture of which Open Peer Review areas need attention. Your purchase includes access details to the Open Peer Review self-assessment dashboard download which gives you your dynamically prioritized projects-ready tool and

shows your organization exactly what to do next. You will receive the following contents with New and Updated specific criteria: - The latest quick edition of the book in PDF - The latest complete edition of the book in PDF, which criteria correspond to the criteria in... - The Self-Assessment Excel Dashboard - Example pre-filled Self-Assessment Excel Dashboard to get familiar with results generation - In-depth and specific Open Peer Review Checklists - Project management checklists and templates to assist with implementation

This User Guide and Handbook is an outcome of a project funded by the Office for Learning and Teaching (OLT) entitled 'A sector-wide model for assuring final year subject and program achievement standards through inter-university moderation'. This

project addressed the Tertiary Education Quality and Standards Agency (TEQSA) imperative to demonstrate sector-level, self-regulated, robust approaches for assuring quality and standards and highlighted the role of peer review. The project tested an inter-institutional blind peer review methodology using a broad, representative range of university partners. In the approach, groups of academics teaching equivalent units of study in two partner universities undertook a blind review of both the assessment inputs (subject outlines, assessment tasks and marking criteria) and

assessment outcomes (de-identified samples of assessment at different grade levels) from a partner university teaching a similar final year subject. The project developed a validated, robust approach for assuring subject achievement standards through inter-university moderation in common final year subjects across disciplines. The findings show that there is broad agreement among peer reviewers from a range of university types on disciplinary teaching and learning standards, particularly in judgements about threshold Pass/Fail grades. Other

outcomes of the project include: a full report; a peer review template; a sample policy for inter-institutional peer review; guidelines for local responses to peer reviewer discrepancies; strategies for publishing selected inter-institutional peer review outcomes; and recommendations for national and institutional policy and practice. [About the project, Full Report abstract, ed] This book has established itself as the authoritative text on health sciences peer review. Contributions from the world's leading figures discuss the state of peer review, question its

role in the currently changing world of electronic journal publishing, and debate where it should go from here. The second edition has been thoroughly revised and new chapters added on qualitative peer review, training, consumers and innovation. This open access volume explores peer review in the scientific community and academia. While peer review is as old as modern science itself, recent changes in the evaluation culture of higher education systems have increased the use of peer review, and its purposes, forms and functions have become more diversified. This

book put together a comprehensive set of conceptual and empirical contributions on various peer review practices with relevance for the scientific community and higher education institutions worldwide. Consisting of three parts, the editors and contributors examine the history, problems and developments of peer review, as well as the specificities of various peer review practices. In doing so, this book gives an overview on and examine peer review , and asks how it can move forward. Eva Forsberg is Professor of Education at Uppsala University,

Sweden. Her research focuses education governance and evaluation, academic work and the interface between educational policy, practice and research. Lars Geschwind is Professor in Engineering Education Policy and Management at KTH Royal Institute of Technology, Sweden. His main research interests are higher education policy, institutional governance, academic leadership and academic work. Sara Levander is Senior Lecturer and Researcher in Education at Uppsala University, Sweden. Her research interests

are higher education, academic work and faculty evaluation in academic recruitment and promotion. Wieland Wermke is Associate Professor in Special Education at Stockholm University, Sweden. His research interest focuses on comparative education methodology, and teacher practice at different levels of education. Peer Review in Nursing: Principles for a Successful Practice is the first nursing publication that approaches the definition and implementation strategies for peer review within an organizational setting. Using a professional model,

with shared governance as a framework, the authors discuss the difference between manager initiated staff performance evaluation of the past and the true peer review aspects of professional practice for the future. This text follows in line with the Magnet program requirement "that nurses at all levels use self appraisal performance review and peer review, including annual goal settings, for the assurance of competence and professional development" page 30 of the 2008 Magnet manual. This unique text teaches nurses the skills they need to demonstrate organizational

processes, structures, and outcomes that help insure accountability, competence and autonomy. The first edition of the EPA Peer Review Handbook was issued in 1998 and was intended to serve as a single, centralized source of implementation guidance on peer review for EPA staff and managers. Subsequent revisions of the Handbook have added necessary clarifications, incorporated insights and experiences gained through its use, and integrated changes to reflect updated government-wide guidance or policy related to peer review. These revisions have

increased the transparency and accountability of peer review and helped ensure that Agency decisions are based on sound and defensible science. For the 4th edition, the EPA's STPC determined that revisions were needed to incorporate several recent EPA policy and process changes related to peer review. Although the 4th edition draws heavily from the 3rd edition, it has been reorganized to emphasize the elements and tools needed to implement a systematic peer review. It retains, however, the "question and answer" format throughout. New flowcharts and

checklists have been added, and several substantial updates are included, such as the additional guidance on appearance of a loss of impartiality in external peer reviews, new information on organizational changes and oversight responsibilities, and changes related to the issuance of recent policies and procedures associated with the EPA's Information Quality Guidelines (IQG). The 4th edition also describes process changes for contractor-managed panel peer reviews of scientific and technical documents designated as

Influential Scientific Information (ISI). The process is intended to reduce the potential for organizational or personal conflict-of-interest (COI) concerns. Early public participation in the nomination and selection of peer reviewers and increased internal oversight are features of the process. The World Conferences on Research Integrity provide a forum for an international group of researchers, research administrators from funding agencies and similar bodies. The second such conference, held in Singapore in July 2010. This volume brings together a selection of

presentations and key guidelines and statements emerging from the Conference. Features a forward by Tim Porter-O'Grady and a reprint of the 1988 ANA Guidelines for Peer Review! Following the end of the Soviet Union, the Russian Orthodox

Church has canonized a great number of Russian saints. Whereas in the first millennium of Russian Christianity (988-1988) the Church recognized merely 300 Russian saints, the number had grown to more than 2,000 by 2006. This book explores the remarkable phenomenon of new Russian martyrdom. It outlines the process of canonization, examines how saints are venerated, and relates all this to the ways in which the Russian state and its people have chosen to remember the Soviet Union and commemorate the victims of its purges. The book includes in-depth

case studies of particular saints and examines the diverse ways in which they are venerated. Sir Francis Bacon's "Novum Organum" is a treatise meant to adjust the thought and methodology of learning about and understanding science and nature. Learn about the four Idols and the inductive method outlined in this keystone philosophy work. This is now known as the Baconian method. The title is a reference to Aristotle's work Organon, which was his treatise on logic and syllogism. Ultimately, the Novum Organum is defined as the "New Tool." But, a new tool for what,

and why is it 'new'? In this book Bacon demonstrates the use of the scientific method to discover knowledge about the natural world. Many of the examples in this volume concern the nature of heat and energy. This book examines the structure and operation of peer review as a family of quality control mechanisms and looks at the burdens placed on the various forms of peer review. Assuming that peer review is central to the functioning of U.S. science policy, Chubin and Hackett explore the symbolic and practical value of peer review in the making, implementing, and analysis of this

policy. How to Survive Peer Review is a practical handbook designed to help anybody who wants to get their work published in a scientific journal, wants to apply for research funds or who has to undergo formal appraisals at work. It will also help people who have been asked to review articles, abstracts or grant applications. These activities are an essential part of scientific life, yet they virtually never get covered in professional training. It is often difficult even to get any helpful information about the processes from journals, meetings or funders. For the first time, this book brings together all

you need to know, with authoritative advice from three authors who have researched peer review extensively and have considerable practical experience as researchers, editors and reviewers. High-quality reviews are vital both for ensuring the excellence of published scholarship and as a way to provide authors with important feedback to use to improve their scholarship. The importance of the reviewer's guide to faculty development cannot be overestimated. This completely updated, expanded second edition is written to support our growing community of

medical education scholars. As dissemination of scholarly work in medical education continues to evolve, review guidelines for different types of work are needed. This edition includes new chapters on reporting qualitative findings, reviewing literature reviews, and reviewing reports on innovations. This guide intends to: Familiarize our reviewers with the purposes of review, approaches to or best practices for reviewing, and criteria for superlative research. Help reviewers organize and communicate their recommendations effectively to Academic Medicine

and other journals. Help researchers by explaining the criteria used to evaluate their submissions Improve peer review and the quality of published research Peer review is a time-consuming and imperfect process, but can result in a radically improved research report that ultimately has a substantial impact on our thinking about difficult problems. This updated guide will contribute to our efforts to improve peer review and improve the quality of published research. This book is the first to provide an in-depth analysis of the peer review process in scholarly publishing. Author

Weller offers a systematic review of published studies of editorial peer review in the following broad categories: general studies of rejection rates, studies of editors, studies of authors, and studies of reviewers. The book concludes with an examination of new models of editorial peer review intended to enhance the scientific communication process as it moves from a print to an electronic environment. J. Matthias Starck comprehensively guides the reader in this essential through all steps of writing an expert review for a scientific journal. It is built on a

succinct analysis how science works, how science is communicated and how science is published. It provides a critical guide how to write good, informative and fair peer reviews. The author presents a critical discussion of different peer review procedures and their alternatives, explains ethical guidelines as well as the dark sides of scientific publishing. So this essential helps the reader to perform better in the existing system and to contribute to its further development and improvement. This comprehensive yet concise book provides a thorough and complete guide

to every aspect of managing the peer review process for scientific journals. Until now, little information has been readily available on how this important facet of the journal publishing process should be conducted properly. Peer Review and Manuscript Management in Scientific Journals fills this gap and provides clear guidance on all aspects of peer review, from manuscript submission to final decision. Peer Review and Manuscript Management in Scientific Journals is an essential reference for science journal editors, editorial office staff and

publishers. It is an invaluable handbook for the set-up of new Editorial Offices, as well as a useful reference for well-established journals which may need guidance on a particular situation, or may want to review their current practices. Although intended primarily for journals in science, much of its content will be relevant to other scholarly areas. This wonderful work by Dr. Hames can be used as a textbook in courses for both experienced and novice editors, and I trust that it is what Dr. Hames intended when she prepared this beautiful book. Every scientific editor should read

it.? Journal of Educational Evaluation for Health Professionals, 2008
