The English-French volume of the International Dictionary of Refrigeration contains approximately 4400 terms with their definitions in the 2 official languages of the International Institute of Refrigeration, English and French. Approximately 200 experts, who are members of the IIR network and are from about 30 countries on all the continents, took part in the development of the Dictionary. The terms are allocated to 11 chapters: Fundamentals - Refrigeration and Production - Refrigerating Equipment - Cooling Methods - Storage, Transport, Distribution - Refrigeration of Perishable Products - Air Conditioning - Heat Pumps - Cryology - Other Applications of Refrigeration - Refrigeration and the Environment. The terms are classified in alphabetical order within 110 sections. An alphabetical index in English and another one in French make it easy to perform searches for terms and their synonyms. 9 volumes will be published containing the terms alone in 9 languages, with the corresponding English and French equivalents: Arabic, Chinese, Dutch, German, Italian, Japanese, Norwegian, Russian and Spanish.

(Now published) Le volume anglais-français du Dictionnaire International du Froid comporte environ 4400 termes avec leurs définitions dans les deux langues officielles de l'Institut International du Froid (IIF). Automation pertains to the theory, art, or technique of making a machine, a process or a device more fully automatic. Computers and information processing equipment play a large role in the automation of a process because of the inherent ability of a computer to develop decision that will, in effect, control or govern the process from the information received by the computer concerning the status of the process. Thus automation pertains to both the theory, and techniques of using automatic systems in industrial applications and the processes of investigation, design and conversion to automatic methods. Automatic control, automatic materials handling, automatic testing, automatic packaging, for continuous as well as batch processing, are all considered parts of the overall or completely automatic process. The Dictionary consists of two parts, Basic Table and Indexes. In the first part the English terms are listed alphabetically, numbered consecutively and followed by its German, French and Russian equivalents. English synonyms appear as cross-references to the main entries in their proper alphabetical order. The second part of the Dictionary, the Indexes, contains separate alphabetical indexes of the German, French and Russian terms. The reference number(s) with each term stands for the number of the English term(s) in the basic table. Elsevier's Dictionary of Automatic Technics will be a valuable tool for specialists, scientists, students and everyone who takes interest in the problems of investigation devoted to the design, development, and applications of methods and techniques for rendering a process of group of machines self-actuating, self-moving, or self-controlling. **TODAY'S TECHNICIAN: AUTOMOTIVE HEATING & AIR CONDITIONING, Fifth Edition, is an integrated, two-book set that covers theory and hands-on content in separate Classroom and Shop Manuals.
