for Addressing Social and Ecological Concerns
provides guidelines for building better parks by
integrating design criteria with current social
and natural science research. Small parks are
too often relegated to being the step-child of
municipal and metropolitan open space systems
because of assumptions that their small size and
isolation limits their recreational capacity and
makes them ecologically less valuable than large
city and county parks. This manual is arranged
around twelve topics that represent key
questions, contradictions, or tensions in the
design of small parks. Topics cover fundamental
issues for urban parks, natural systems, and
human aspects. Also included are useful case

studies with alternative design solutions using three different approaches for integrating research findings into small urban park design. A never-before-seen collection of United States National Park Service maps This book brings together a collection of over 400 maps produced by the United States National Park Service from 1910 to today. Photographer Brian Kelley has impulsively archived the rarely seen treasures

over the past three years, uncovering a design portfolio with little to no credit to their respective designers. The growing collection displays a progressive design approach, from more typographic-driven covers, to the proliferation of duotone print production, culminating in the Unigrad system developed by Italian designer Massimo Vignelli in the 1970s. Excerpt from *Manual for Railroad Visitors: Time-Tables, Yellowstone Park Tours; Yellowstone National Park, June 20-September 19, 1928* The following sections of the rules and regulations which are the law of the park should ever be kept in mind and faithfully observed.
